

Team – 05

Minutes of Meeting (MoM)

Date of Meeting: 12.12.2024

Time of Meeting: 10:40 AM to 10:55 AM

Questions to Address

1. Who is the target audience: people or valuables?
2. Is the solution aimed at convenience or real safety?

Suggestions Provided

1. Focus on the core functionality of monitoring and alerting if a taxi deviates from the planned route. Alerts should be sent to friends or family for immediate action.
2. Introduce **levels of integration** to develop features incrementally:
 - a. **Level 1:** Log travel data history and store it in a secure database.
 - b. **Level 2:** In case of an alert, cross-check the taxi's details with Parivahan records to verify authenticity.
3. Future Scope: Store data on a blockchain to enhance security and immutability if time permits.
4. The system should predefine a route for each trip. Any deviation from this route should trigger an alert mechanism.
5. Travel data history can provide valuable insights and be useful for future analysis.
